@EU_ACE

WELCOME

It is with great pleasure that we welcome you to the #ACESummit 2015 at the Global Entrepreneurship Congress in Milan.

Congratulations especially to the 50 companies from across Europe who have come through a competitive process to be part of this unique event. Building on the success of the inaugural ACE Summit in 2014, the 2015 edition again introduces the most innovative ICT SMEs and start-ups from across Europe to investors, mentors and potential partners in other European markets. In parallel with these B2B activities the Summit features an investment forum and a training strand (investment readiness roundtables and living labs clinic) for participating SMEs.

Coordinated by WestBIC and EBN, the pan-European network of EU Business and Innovation Centres (EU-BICs), ACE involves 15 partners from 11 European countries. Through this network ACE companies can access support services in their target markets as if they were a local SME. This direct contact has led to a 92% endorsement rate from the 100 SMEs that participated in the first year of ACE.

Made possible by the support of the European Union's Seventh Framework Programme (FP7), ACE exemplifies how pan-European collaboration can stimulate and speed up economic growth and job creation in all member states. We take this chance to thank all our partners and participating SMEs, investors and mentors for embarking on the ACE journey and wish you a fruitful and enjoyable day in Milan.

Philippe Vanrie
CEO, EBN

Joe Greaney
CEO, WestBIC

WANDERANT

**Travel tool for uber-planners:
organize and access all the info
about your trip in one place**

Sector

Investment sought

Country

Tourism

€500,000

Spain

Summary:

Wanderant is a workflow tool for planning trips. It's meant for uber-planners – travelers that spend hours planning trips in detail, researching multiple websites and manually organizing their plans in spreadsheets, maps, and printouts. Wanderant saves them time and effort by bringing the separate pieces of planning together. It ties together relevant information – attractions, maps, transportation, hotels, etc – into one workflow where pieces relate to each other, and the traveler can use them to build a full plan. When the plan is done everything is available through our app offline during the trip.

GREINON

Greinon makes illumination smart and efficient, saving 85% costs, helping environment and improving quality of lighting

Sector

ICT, Cleantech, smart energy

Target Clients

European public, industrial and commercial lighting partners

Country

Sweden

Summary:

We develop smart control system for LED lighting. The innovative component of the product is algorithms used for communication between lights and main server, and the competitive advantage is the system's flexibility. The system saves up to 85% on energy and significantly cuts maintenance costs. The hardware can be embedded into lighting fixtures or installed as a stand-alone system. The software allows for remote control of the lights from computer or mobile device. The system adjusts the level of lighting depending on the need.
