Introduction and theme

Gathering Global Experts, Advancing Win-Win Cooperation

The 2016 forum on cross-border innovation and entrepreneurship will be co-hosted by China Association of Science and Technology, Jiangsu provincial government and Duke University, focusing on industries include New-Generation Information Technology, New Materials, Energy & Environmental Protection, Intelligent Manufacturing, Biomedicine, Finance & Technology, and the operation & Management of high-tech parks. The intended inviting speakers include world-leading experts like the author of innovation nation, advisor to Hilary Clinton (John Kao), former dean of CEIBS (William Fischer), and professor of design at Arizona State University, (Dr. Jacques Giard). This forum aims to connect overseas talents and corporates with local Chinese companies to foster cross border collaboration, and to provide an expedited channel for overseas talents & corporates to invest and start their business operation in Kunshan and other cities in Jiangsu Province, through speeches from world-leading experts, parallel forums and business collaboration match-making sessions based on industry, project roadshows, as well as field trip to local factories and technology parks.

New Cooperation Mode: European High-tech + Chinese Investment

Recently, the Chinese buyers reached or completed a number of acquisitions in Europe, which witnesses that Chinese enterprises are continuing to invest in EU. M & A is the main form of Chinese enterprises to invest in Europe, such as China Chemical purchased the Italian tire company Pirelli; China Ocean Shipping Group (COSCO shipping) purchased Greek Piraeus Port Authority; Midea purchased German Industrial Robot Manufacturer KUKA; Chinese consortium purchased European giant AC Milan Football Club.

Obviously, "going out" of Chinese enterprises is speed, Chinese companies are involved in European trade and investment. Fields of Chinese investment in Europe are very wide, which from the airport, nuclear power and other infrastructure, to the chemical, energy, real estate, entertainment and other industries.

With China's economic transformation and upgrading, more and more Chinese enterprises invest overseas in advanced manufacturing and modern service industry. High-tech investments in the field of robotics, automation equipment, are also becoming increasingly active.

Advantages
